GRIVEN

PARADE D-RGB-5 RECESSED, PARADE D-RGB-10 RECESSED AND DUNE-FC

The latest solutions by GRIVEN in RGB LED WALK-ON applications for refined architectural decoration. The new PARADE D-RGB-5 RECESSED and PARADE D-RGB-10 RECESSED LED bars are a couple of super flux 3W full colour chips colour changers for recessed use in pedestrian areas that incorporate state of the art electronic colour mixing and minimal maintenance. Superb output with real uniform colour coverage even on close-up installations is provided by the newly conceived elliptical optics that can now capture a greater fraction of light with a higher transmission efficiency. PARADE D-RGB-5 RECESSED and PARADE D-RGB-10 RECESSED feature an IP67 weather protection along with a compact size and a light weight manageability. DUNE-FC is a powerful 3W full-colour LED colour changer, specifically designed for exterior recessed applications. The electronic colour mixing system, using super flux and high luminance LEDs gives a powerful and even palette of attractive pastel or deep colours. The environmental impact of these fittings is really small with no ultraviolet radiation and infrared emanation, an exceptionally low power consumption and a drastically reduced maintenance requirement. DUNE-FC features an IP67 weather protection rating and its 2000 kg deadweight load capacity makes it suitable for ground mounting applications even in vehicled areas. Various models are available with different beam angle options including an asymmetrical set-up. The digital control system, obtainable from any four-channel remote DMX512 control desk, includes also stand alone functions and master and slave mode.
